

fixLink® SL CTBC Distribution System

Copper-Trunk-Bundled-Cable

The CTBC distribution system is ideal for flexible use in structured building cabling and data centers. The cables are prebundled in a braided hose and are factory assembled and pre-tested with fixLink® Keystone modules. The bundles can be made using either installation or flexible cables. The maximum length of the bundled cable is 20 meters. The distribution system as 10 Gbit solution for data center cabling meets Class E requirements at a minimum. The transmission parameters depend on the choice of fixLink® modules used.

Features:

- Bundling of AWG 22 to AWG 27 data cables
- Universal pre-assembly with preLink® cable connectors
- Slim cable end
- Flexible installation
- Up to 12 cables

Properties of braided hose:

- UL-certified
- Reach
- RoHS
- Easy installation due to 100% covering
- halogen-free

Applications:

- Data centers
- Cabinet connections
- Structured building cabling
