

# fixLink® CTBC Distribution System

## Copper-Trunk-Bundled-Cable

The CTBC distribution system is ideal for flexible use in structured cabling and data centers. The cables are pre-bundled in a braided hose and are factory assembled and pre-tested with fixLink® Keystone modules.

The bundles can be made using either installation cables or flexible cables. The maximum length of the bundled cable is 20 meters.

The distribution system as 10 Gbit solution for data center cabling meets Class E<sub>A</sub> requirements at a minimum.

The transmission parameters depend on the choice of fixLink® modules used.

#### Features:

- Bundling of AWG 26 or AWG 23 data cables
- Universal pre-assembly with preLink® connectors
- Slim cable end
- Flexible installation
- Up to 12 cables

#### Range of application:

- Data centers
- Switch cabinet connections
- Structured cabling
